- A. >>
- B. SWUS
- C. SU
- D. APROPOS

Answer: C

Question: 15

Text editors are similar to word processors, which provide various features for writing documents. Following is a list of three text editors that are available on Linux. Drag the names of the text editors in front of their appropriate descriptions.

Editor	Description
Place Here	This editor is integrated with the Pine e-mail client, which was designed by the Office of Computing and Communications at the University of Washington. It does not support working with several files simultaneously and cannot perform a find and replace across multiple files.
Place Here	This editor is an interactive, cryptic, and screen-based text editor used to create and edit a file. It operates in either Input mode or Command mode. In Input mode, this editor accepts a keystroke as text and displays it on the screen, whereas in Command mode, it interprets keystrokes as commands.
Place Here	This editor provides commands to manipulate words and paragraphs (deleting them, moving them, moving through them, and so forth), syntax highlighting for making source code easier to read, and "keyboard macros" for performing arbitrary batches of editing commands defined by the user.

Vi
Emacs
Pico

A.

Editor	Description
Pico	This editor is integrated with the Pine e-mail client, which was designed by the Office of Computing and Communications at the University of Washington. It does not support working with several files simultaneously and cannot perform a find and replace across multiple files.
Vi	This editor is an interactive, cryptic, and screen-based text editor used to create and edit a file. It operates in either Input mode or Command mode. In Input mode, this editor accepts a keystroke as text and displays it on the screen, whereas in Command mode, it interprets keystrokes as commands.
Emacs	This editor provides commands to manipulate words and paragraphs (deleting them, moving them, moving through them, and so forth), syntax highlighting for making source code easier to read, and "keyboard macros" for performing arbitrary batches of editing commands defined by the user.
