---

**Question: 1**

---

Which vDisk change will always require the use of reverse imaging?

- A. Installing a new service pack on a Windows-based vDisk.
- B. Upgrading the Provisioning services target device software installed on the vDisk.
- C. Updating the NIC drivers on the vDisk.
- D. Making permanent registry changes to the vDisk.

---

**Answer: C**

---

---

**Question: 2**

---

Scenario: A company has locations in three cities: New York, San Francisco and Miami. Each location maintains a large number of users who will need to access applications and desktop resources. The company owns sufficient hardware resources to include an operational SQL server in the main New York location.

The new XenDesktop infrastructure build needs to operate with the least administrative overhead. Which deployment option should a Citrix Engineer implement to meet this requirement?

- A. A multi-Site infrastructure with each city maintaining its own fully functional Site and including at least one Delivery Controller and SQL database in each Site location.
- B. A single XenDesktop Site with three zones (Primary Zone in New York and two Satellite Zones in Miami and San Francisco) and one SQL database maintained in each zone.
- C. A single XenDesktop Site with three zones (Primary Zone in New York and two Satellite Zones in Miami and San Francisco) and a single SQL database maintained in New York.
- D. A single XenDesktop Site with three zones (Primary Zone in New York and two Satellite Zones in Miami and San Francisco) and SQL database with AlwaysOn configured.

---

**Answer: C**

---

Explanation:

They only have resources in New York, therefore only implementing a Database in NY.

---

**Question: 3**

---

A Citrix Engineer needs to map a network drive for the HR user group, but does NOT want the

network drive to be available to Windows XP users.

Which step can the engineer take within Workspace Environment Management (WEM) to complete this task?

- A. Add the Infrastructure Services server ADMX template to the Active Directory group policy and configure the network drive setting in a GPO. Then apply a filter to assign the No Client OS Match condition to Windows XP and assign the GPO to the OU containing the HR users.
- B. Add the network drive in the WEM environmental settings and apply the No Client OS Match condition to Windows XP. Then assign environmental setting to the HR user group.
- C. Use the Management Agent Host Configuration ADMX template to specify the network drive location. Then apply a filter to assign the No Client OS Match condition to Windows XP and a second filter to assign the Active Directory Group Match to the HR user group.
- D. Create an action mapping the network drive and apply the No Client OS Match condition to Windows XP. Then assign the action to the HP user group.

---

**Answer: D**

---

---

#### **Question: 4**

---

Scenario: A Citrix Engineer recently implemented a Provisioning Services pilot environment, which still has all the default configurations and uses a standalone SQL Server Express machine to host the Farm database. Management would like the engineer to expand the environmental so that it can be used to support several critical use cases within the organization. The farm database must meet these requirements:

- The solution must ensure that production users are NOT impacted in the event of a database outage.
- The solution must NOT require manual administrator intervention.
- No additional funding is available to accomplish this objective.

Which configuration will meet all the requirements of the scenario?

- A. SQL AlwaysOn Availability Group
- B. Offline database support
- C. SQL Mirroring
- D. SQL Clustering

---

**Answer: B**

---

---

#### **Question: 5**

---

Which Provisioning Services infrastructure component must a Citrix Engineer configure first during the initial deployment?

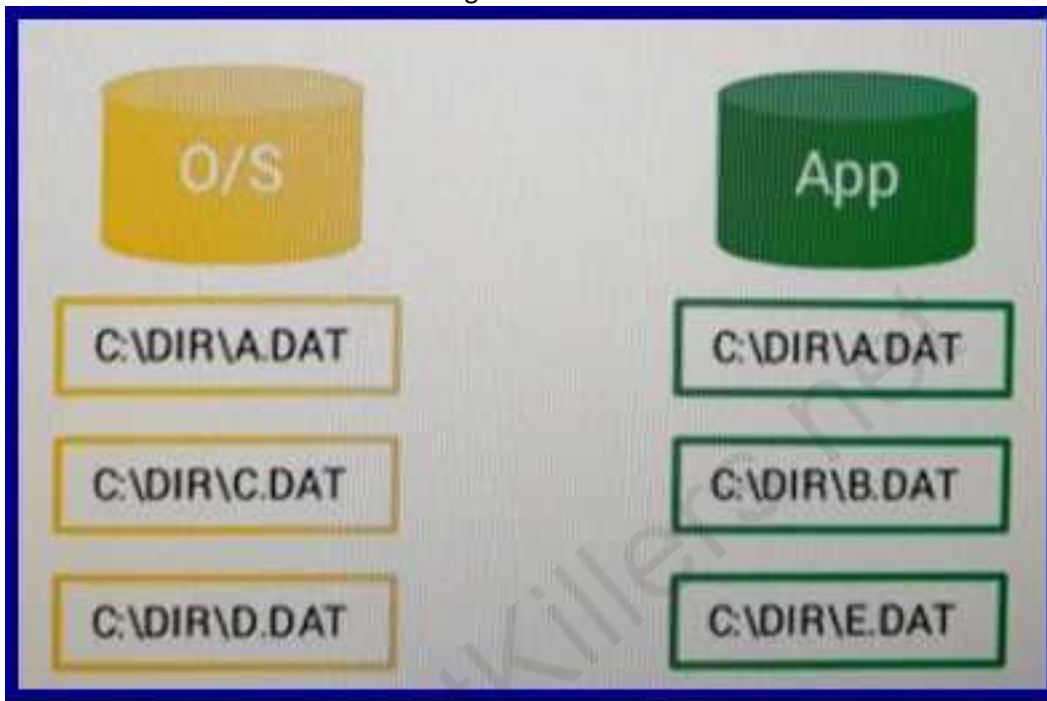

- A. Site
- B. Farm
- C. Device collection

D. Store

**Answer: B**

**Question: 6**

Click the Exhibit button to view the diagram.

Scenario:

A Citrix Engineer recently implemented XenDesktop in an environment. The environment has a provisioned Windows 10 virtual desktop layered with the help of Enterprise Layer Manager (ELM) and provisioned through Machine Creation Services (MCS) technology.

Which set of files will be presented to the operating system through the composite file system merging process according to the diagram?

- A. OS Layer – C.DAT & D.DATApp Layer – B.DAT & E.DATUser Layer – F.DAT & A.DAT
- B. OS Layer – D.DATApp Layer – B.DAT & E.DATUser Layer – A.DAT, C.DAT & F.DAT
- C. OS Layer – A.DAT & C.DATApp Layer – B.DAT & E.DATUser Layer – D.DAT & F.DAT
- D. OS Layer – A.DAT, C.DAT & D.DATApp Layer – B.DAT & E.DATUser Layer – F.DAT

---

**Answer: B**

---

---

### Question: 7

---

Scenario: A Citrix Engineer maintains a multi-zone XenDesktop infrastructure with two Virtual Delivery Agent (VDA) machines located in the Primary Zone and two VDAs in the Satellite Zone. Each zone contains a single Delivery Controller.

During an unexpected outage, the Delivery Controller in the Primary Zone went offline and did NOT resume.

What will happen to the VDAs in the Primary Zone?

- A. The VDAs in the Primary Zone will attempt to register with the Delivery Controller in the Satellite Zone.
- B. The VDAs in the Primary Zone will make intermittent attempts to re-register with the Delivery Controller in the Primary Zone.
- C. The VDAs in the Primary Zone will remain in a registered state, regardless of the Delivery Controller being offline.
- D. The VDAs in the Primary Zone will go to an unregistered state and NOT attempt to re-register until the local Delivery Controller resumes and is online.

---

**Answer: B**

---

---

### Question: 8

---

Which role should a Citrix Engineer assign to an administrator who needs to change vDisk properties, while also minimizing other permissions assigned to that administrator?

- A. Device Operator
- B. Device Administrator
- C. Site Administrator
- D. Farm Administrator

---

**Answer: C**

---

---

**Question: 9**

---

A Citrix Engineer is checking the IOPS on the local vDisk Store after setting up and configuring the environment.

Which two tools can the engineer use to check the IOPS for the Store? (Choose two.)

- A. Performance Monitor
- B. Process Monitor
- C. Process Explorer
- D. Disk Management

---

**Answer: A,B**

---

Explanation:

---

**Question: 10**

---

Scenario: A company has locations in three cities: New York, San Francisco and Miami. Each location is connected over a WAN link. Each location maintains a large number of users who will need to access applications and desktop resources.

A Citrix Engineer maintains minimal hardware resources and needs to build a new XenDesktop infrastructure that can guarantee a reliable network for the users and which requires minimal infrastructure management for the engineer.

Which deployment should the engineer implement to meet this scenario?

- A. A single XenDesktop Site with three zones (Primary Zone in New York and two Satellite Zones in Miami and San Francisco), and one SQL database maintained in each zone.
- B. A single XenDesktop Site with three Satellite Zones (New York, Miami and San Francisco), with each zone maintaining its own Cloud Connector and implementation of the infrastructure within the Citrix Cloud.
- C. A single XenDesktop Site with three zones (Primary Zone in New York and two Satellite Zones in Miami and San Francisco), and one SQL database maintained in New York.
- D. A single XenDesktop Site with three Satellite Zones (New York, Miami and San Francisco), a single Cloud Connector in one of the Satellite Zones and implementation of the infrastructure within the Citrix Cloud.

---

**Answer: B**

---
