You are a desktop engineer for a small company. Your sales associates currently use Windows 7 computers that run Windows XP Mode for a legacy business application.

You are deploying new computers for your sales associates due to life cycle management. You have the following requirements:
Ð The new computers must run Windows 8.1 and have Hyper−V installed.
Ð The Windows XP Virtual Machines (VM) should be isolated from the host machine on your network and from other VMs. You need to create a virtual switch to meet these requirements. Which type of switch should you use?

A. Private switch
B. External switch
C. Distributed switch
D. Internal switch

Answer: A

Explanation:
http: ƒ ƒwindows.microsoft.com ƒen−us ƒwindows7 ƒinstall−and−use−windows−xp−mode −inwindows−7 Install and use Windows XP Mode in Windows 7 Using Windows XP Mode, you can run programs that were designed for Windows XP on computers running Windows 7 Professional, Enterprise, or Ultimate editions. Windows XP Mode isn't supported on Windows 8. How does Windows XP Mode work? Windows XP Mode works in two ways — both as a virtual operating system and as a way to open programs within Windows 7. It runs in a separate window on the Windows 7 desktop, much like a program, except it's a fully−functional, fully−licensed version of Windows XP. In Windows XP Mode, you can access your physical computer's CDƒDVD drive, install programs, save files, and perform other tasks as if you were using a computer running Windows XP. When you install a program in Windows XP Mode, the program appears in both the Windows XP Mode list of programs and in the Windows 7 list of programs, so you can open the program directly from Windows 7.

Programs installed in Windows XP Mode in the Windows 7 Start menu

Virtual switches∫ Hyper−V VLAN − you can create 3 different types of virtual switches depending the needs of your virtual machines and one single machine can use multiple virtual NICs that is member of different Virtual Switches.
Ð External − This virtual switch binds to the physical network adapter and create a new adapter you
can see in Control Panel\Network and Internet\Network Connections so if a virtual machine needs contact outside the host machine this one is a must.
Ð Internal − This virtual switch can be used to connect all virtual machines and the host machine but cannot go outside that. Ð Private − This virtual switch can only be used by the virtual host
