*Assess: Fundamentals of Applying Tivoli Storage Management V3*

**QUESTION: 90**

An IBM Tivoli Storage Manager administrator asks IBM what software investment must be made to move the data over the Storage Area Network (SAN) instead of the Local Area Network (LAN). Today, the Exchange Data is backed up to IBM Tivoli Storage Manager over the LAN. What should be recommended?

- A. IBM Tivoli Storage Manager SANERGY File Sharing
- B. IBM Tivoli Storage Manager FastBack for Exchange
- C. IBM Tivoli Storage Manager for Storage Area Networks
- D. IBM Tivoli Storage Manager Extended Edition (Library Support)

**Answer: C**

**QUESTION: 91**

Given the customer's storage hardware (storage area network (SAN), switches, tape, disk, and other devices), which two tasks should be done before IBM Tivoli Storage Productivity Center is implemented? (Choose two.)

- A. identify unused ports
- B. identify SAN switches
- C. identify unused networks
- D. validate hardware firmware levels
- E. validate IBM Information Archive appliance hardware, firmware, and software versions

**Answer: B, D**

**QUESTION: 92**

An insurance company is required to retain claims information for 30 years and wants the ability to restore that data in one business day. Which document typically contains this type of requirement?

- A. service level agreement
- B. storage level agreement
- C. storage retention contract
- D. document of understanding

**Answer: A**

**QUESTION: 93**

Which two important items should be documented when assessing the customer's storage

environment? (Choose two.)

- A. disk management
- B. data management
- C. product certifications
- D. problem management
- E. hardware administration

**Answer:** A, B

**QUESTION:** 94

The customer has an IT environment build upon 40 Microsoft Windows servers and about 12 Linux servers. Every six months the customer exercises the Disaster Recovery Scenario. The plan is built with the help of Disaster Recovery Manager. This function of IBM Tivoli Storage Manager (TSM) creates an executable disaster recovery plan. However, the last exercise took the customer too much time to setup the different servers and they were unable to achieve the Recovery Time Objective. There is a budget to make some improvements. The Service Level Agreement permits a data loss of 24 hours. Which recommendation supports the customer's goals?

- A. implement the Automated System Recovery
- B. implement Tivoli Bare Machine Recovery
- C. implement TSM for System Backup and Recovery
- D. implement TSM Continuous Data Protection for Workstations

**Answer:** B

**QUESTION:** 95

Which education class should a newly acquired, large customer begin with for IBM Tivoli Storage Manager?

- A. IBM Tivoli Storage Manager Disaster Recovery
- B. IBM Tivoli Storage Manager Differences and Upgrade
- C. IBM Tivoli Storage Manager Implementation and Administration
- D. IBM Tivoli Storage Manager Advanced Administration, Tuning, and Troubleshooting

**Answer:** C

**QUESTION:** 96

A customer wants to use a common interface to manage their Global Mirrors between the

DS8000 in Phoenix, Arizona, the DS8000 in Sierra Vista, Arizona and the DS8000 in Tucson, Arizona and ensure that the Global Mirrors can be automatically failed over in case of a DS8000 failure at one of the sites. Which product should be recommended?

- A. IBM System Storage San Volume Controller
- B. IBM Tivoli Storage System Automation Manager
- C. IBM Tivoli Storage Productivity Center for Replication
- D. IBM General Parallel File System (in HA configuration)

**Answer:** C

**QUESTION:** 97

A financial institution must have certain data protected from malicious or accidental deletion. Which command or option can be applied to a new IBM Tivoli Storage Manager server to ensure that policy cannot be changed on archived data?

- A. RETVER=999
- B. SET DATARETENTION ON
- C. SET ARCHIVERETENTIONPROTECTION ON
- D. UPDATE STORAGE RECLAMATIONTYPE=SNAPLOCK

**Answer:** C

**QUESTION:** 98

When creating a customer's current storage baseline document, what is relevant input into a Storage Solution Design Document?

- A. customer's key storage hardware
- B. customer's data management practice
- C. customer's Service Level Agreements
- D. customer's current data backup practices

**Answer:** C

**QUESTION:** 99

The customer has a large IT environment which must be protected by IBM Tivoli Storage Manager (TSM). In the proposal is a design for new hardware for the TSM server. All backup data travels over the local area network. The TSM server has a tape library attached with 20 LTO 5 drives. The hardware server is a Power 7 AIX server. The customer has a standard Storage Area Network of 4 Gbps. How many total Fibre Channel adapters should

be installed on the Power Server?

- A. one 4Gbps dual-port HBA adapters
- B. five 4Gbps dual-port HBA adapters
- C. 10 4Gbps dual-port HBA adapters
- D. 20 4Gbps dual-port HBA adapters

**Answer: C**

**QUESTION: 100**

The customer has documented their mandatory requirements, the total data amount to be backed up, and provided all rules and regulations that must be followed. What are the next steps in defining the data retention policy?

- A. create the TSM domain, policy, and management classes
- B. translate government regulations into retention sets and transform retention sets into retention rules
- C. create business rules, translate business rules into execution rules, and transform execution rules into backup rules
- D. create a subset of requirements based on maximum amount of data and create an outline of storage pool requirements

**Answer: C**
