Version: 5.0

Question: 1	
Which tool is used to create a connection point to an existing Process En	ngine isolated region?
A Workplace VT	
A. Workplace XT. B. Process Administrator.	
C. FileNet Enterprise Manager.	
D. Process Configuration Console.	
D. Process Configuration Console.	
	Answer: C
Question: 2	
Question. 2	
When using Workplace XT and a user is out of the office (e.g., vacatio	n) where can they specify an
alternate person to receive their Process Engine work items?	iii, where can they specify an
alternate person to receive their Process Engine work items:	
A. Site Preferences.	
B. Process Configuration Console.	
C. Task Settings under User Preferences.	
D. General Settings under User Preferences.	
	Answer: C
Overtime 2	
Question: 3	
Which of the following is NOT reported to IRM FileNet Dashboard?	
Which of the following is NOT reported to IBM FileNet Dashboard?	
A. Remote procedure call counts and durations.	
B. Number of documents stored in the Content Engine.	
C. System specifications, operating system version, and product version	
D. Real-time graphing of performance data, including CPU load and mer	
	·
	Answer: B
Question: 4	
How can you start and stop P8 components?	

- A. IBM FileNet Enterprise Manager.
- B. Command-line based instruction only for Unix.
- C. Graphical user interface (GUI) only for Windows.

D. Graphical user interface (GUI) based	d or command-line-based instruction.
---	--------------------------------------

Answer: D

Question: 5

In which two scenarios should the Content Consistency Checker be used? (choose two.)

- A. Content Engine is performing slow.
- B. If search templates are not working.
- C. After restoring a storage area from backup media.
- D. To troubleshoot Fixed Content Device connectivity.
- E. If users are unable to view the content of a document when the content is stored in a file storage area, even when they have view-content permissions on the document.

Answer: C,E

Question: 6

Consider the following distributed P8 configuration:

Server A - Content Engine; Content Search Engine

Server B - Process Engine; Workplace XT

Server C - Relational database server

Database files - located on local storage on server C

Index collection files - located on local storage on server A

Objectstore file storage files - located on network attached storage (NAS)

All object stores contain file storage areas and are configured for content based retrieval (CBR). A complete offline backup of the system runs daily at 10 PM. If server A crashes at 2 PM and must be replaced, how should the administrator recover the system?

- A. Restore all files for server A from backup.
- B. Restore all files for server A from backup and re-index the object stores.
- C. Restore all files for server A from backup and restore the database files to server C.
- D. Restore all files for server A from backup and restore the file storage files to the NAS device.

Answer: B

Question: 7

For documents in which a date based property is a primary identifier, which type of partitioning will reduce query retrieval time?

- A. Date partitioning.
- B. Index partitioning.
- C. Interval partitioning.
- D. Collection partitioning.

	Answer: D
Question: 8	
Which of the following actions can be performed within the	query builder?
A. Execute Java code.	
B. Search across object stores.	
C. Perform content-based retrieval.	
D. Save searches in an object store.	
	Answer: C
Question: 9	
What is the Composite Platform Installation Tool?	
·	
B. A tool that allows you to install P8 on multiple servers.	
B. A tool that allows you to install P8 on multiple servers.C. A tool that allows you to install P8 components remotely.	3.10
B. A tool that allows you to install P8 on multiple servers.C. A tool that allows you to install P8 components remotely.D. A tool that allows you to install P8 components on a server.	single server, including the middleware
B. A tool that allows you to install P8 on multiple servers.C. A tool that allows you to install P8 components remotely.D. A tool that allows you to install P8 components on a sapplications such as the database and web	single server, including the middleware
