IBM PureApplication System V1.1, System Administration

QUESTION: 79

Which of the following is NOT an advanced configurable option of the Intelligent Management Pack feature of the IBM WebSphere Application Server Hypervisor Edition virtual image?

- A. Dynamic clustering
- B. Health management
- C. Failover support
- D. Autonomic VM elasticity
- E. Overload protection

Answer: C

QUESTION: 80

An application deployer has created a JEE virtual application pattern, based on the Web Application 2.0.0.0 pattern type, and locked it down. The system Administrator meanwhile has installed Web Application pattern type 2.0.0.1 and created a number of DB2 emergency fixes in the catalog applicable to the foundation virtual image upon which the JEE virtual application pattern is based. Which of the following is a true statement?

- A. Use the "Manage" -> "Operation" link of the virtual application instance to generate a heap dump for memory analysis
- B. Use the "Manage" -> "Operation" link of the virtual application instance to apply the emergency fixes to the virtual application
- C. Use the "Upgrade" link of the virtual application instance to apply the emergency fixes to the virtual application
- D. Use the "Upgrade" link of the virtual application instance to apply the Web Application pattern type 2.0.0.1 changes to the virtual application

Answer: A

QUESTION: 81

IBM PureApplication System gives you the ability to augment your virtual applications with different qualities of service by way of policies. Which of the following policies are applicable to virtual applications? (Choose three.)

- A. SLA Policy
- B. Log policy
- C. Routing Policy

- D. WS-Policy
- E. Scaling policy

Answer: B, C, E

QUESTION: 82

IBM PureApplication System gives you the possibility to manually create clones of your existing virtual machine in order to handle increased workload. Which of the following is NOT a supported feature of virtual machine cloning?

- A. Multiple clone operations can occur simultaneously as long as they are tied to the same virtual system
- B. Any part within the virtual system can be cloned
- C. Any maintenance applied to the source virtual machine is automatically applied to the cloned virtual machine
- D. Script packages marked to run at virtual system creation time on the source virtual machine get executed at virtual system creation time on the cloned virtual machine

Answer: B

QUESTION: 83

The Guided Service Tasks panel in IBM PureApplication System is only accessible to the IBM CE to perform which of the following tasks? (Choose three.)

- A. Replace a solid state drive
- B. Replace a power supply module
- C. Apply firmware updates to the system
- D. Replace a fan module

Answer: A, B, D

QUESTION: 84

Virtual system patterns allow you to customize the middleware topology to suit the need for automation during repeatable deployments. Which of the following best describes ways to achieve this goal?

- A. Use of script packages and add-ons within your patterns

- B. Use of the extend and capture feature with your virtual images
- C. Use of Advanced Middleware Configuration (AMC) tool for on boarding your existing application
- D. All of the above

Answer: D

QUESTION: 85

how many management nodes are included with IBM PureApplication System?

- A. One Master PureApplication System Management Node.
- B. Four Management Nodes total - Two PureApplication System Management Nodes and Two VM Management Nodes
- C. Two Management Nodes total - One PureApplication System Management Nodes and One VM Management Nodes
- D. Six Management Nodes total - Two PureApplication System Management Nodes, Two VM Management Nodes, and Two PureFlex Management Nodes

Answer: B
