Version: 7.0

Question: 1

What is a characteristic of administrative areas?

A. The company area cannot be edited.

B. The company area can be created optionally.

C. The company area is created by default.

D. The company area membership is optional

Answer: C

Explanation:

Administrative areas are geographic regions that are established for the purpose of administration, governance, and management of public services. Some of the characteristics of administrative areas include:

Defined boundaries: Administrative areas have clearly defined boundaries that separate them from neighboring regions. These boundaries are typically established by government or other authorities and can be based on physical, political, or cultural features.

Hierarchical structure: Administrative areas are often organized into a hierarchical structure, with larger regions being divided into smaller sub-regions for more efficient governance and management.

Administrative control: Administrative areas are typically under the control of a centralized

government or administrative body, which is responsible for managing and coordinating public services within the region.

Legal framework: Administrative areas are often governed by specific legal frameworks that dictate the powers, responsibilities, and duties of the administrative bodies that oversee them.

Population and demographic data: Administrative areas often maintain detailed records of population and demographic data, which are used to inform planning and decision-making around public services and infrastructure development.

Political representation: Administrative areas may have elected officials or representatives who are responsible for advocating for the interests of the region and its residents within the larger political system.

Question: 2

Which of the following are scenarios that could be implemented with extensions for SAP Build Work Zone, advanced edition? (Choose three.)

A. Ensure single-sign-on experience for all users

B. Show a list of flights or hotels booked by the user in the corporate travel system

C. Create a new link to corporate policies in the user menu

D. Change the system logo and color scheme

E. Show a list of incidents reported by a user from an on-premise or cloud system

Answer: B,C,E

Explanation:

Based on my knowledge cutoff of 2021, SAP Build has been sunsetted and replaced by SAP Fiori. However, assuming that extensions for SAP Build Work Zone, advanced edition are still available, the three scenarios that could be implemented with these extensions are:

A. Ensure single-sign-on experience for all users

B. Show a list of flights or hotels booked by the user in the corporate travel system

E. Show a list of incidents reported by a user from an on-premise or cloud system

Question: 3

Which of the following artifacts can be included in a content package? (Choose three.)

A. UI Integration Cards

B. Workspace templates

C. SAP Fiori applications

D. Workflows

E. Launchpad (shell) plugins

Answer: A,B,E

Explanation:

The three artifacts that can be included in a content package are:

B. Workspace templates

D. Workflows

E. Launchpad (shell) plugins

UI Integration Cards and C. SAP Fiori applications are not typically included in content packages.

Question: 4

Where can the SAP Build Work Zone mobile app passcode policy be configured?

A. SAP BTP subaccount mobile service

B. DWS admin console compliance & security

C. DWS admin console content manager

D. DWS admin console mobile service

Answer: D

Explanation:

The SAP Build Work Zone mobile app passcode policy can be configured in the DWS (Design Work Space) admin console compliance & security. Therefore, option B is correct. The compliance & security section of the DWS admin console allows administrators to define and enforce policies related to user authentication, access control, and data protection, including passcode policies for mobile apps. The other options (A, C, and D) are not related to configuring passcode policies for mobile apps in SAP Build Work Zone.

Question: 5

Which SAP Build Work Zone administrator types require an assignment of a role collection? (Choose three.)

A. Company administrator

B. Sub-Workspace administrator

C. Support administrator

D. Workspace administrator

E. Area administrator

Answer: A,B,D

Explanation:

The SAP Build Work Zone has the following administrator types:

  Workspace administrator

  Sub-Workspace administrator

  Area administrator

  Company administrator

  Support administrator

Out of these administrator types, the following three require an assignment of a role collection:

A. Company administrator

B. Sub-Workspace administrator

E. Area administrator

The role collection determines the permissions and access levels for each administrator type, so it is important to assign the appropriate role collection to each administrator to ensure they have the necessary permissions to perform their tasks.
