	Answer: C
Question: 2	
On a sensor, which command will indicate if log mes	ssages are being sent to Security Manager?
A. scio vr list	
3. service idp status	
3. service idp status C. scio agentstats display	
B. service idp status C. scio agentstats display	Answer: C
B. service idp status C. scio agentstats display D. scio getsystem  Question: 3	Answer: C

After you enable alerts for new hosts that are detected by the Enterprise Security Profiler, where do you look in Security Manager to see those alerts?

- A. Security Monitor > Profiler > Application Profiler tab
- B. Security Monitor > Profiler > Violation Viewer tab
- C. Security Monitor > Profiler > Network Profiler tab
- D. Log Viewer > Profiler Log

Answer: D

## Question: 4

When connecting to a sensor using SSH, which account do you use to login?

- A. admin
- B. super
- C. netscreen

C. destination address

D. root		
D. root		
		Answer: A
Question: 5		
Which OSI layer(s) of a packet of	does the IDP sensor examine?	
A. layers 2-7		
B. layers 2-4		
C. layer 7 only		
D. layers 4-7		
		Answer: A
Question: 6		
Which two will change the mar	nagement IP of an IDP sensor? (	Choose two.)
_	object in Security Manager GUI	and change the IP address.  d re-add the sensor with the new IP
address.	is the manager and	
C. Use ifconfig to change the m	anagement IP address.	
D. Use the ACM to change the	management IP address.	
		Answer: B, D
Question: 7		
Which rule base would detect	notent?	
which rule base would detect	lettatr	
A. SYN protector		
B. traffic anomalies		
C. backdoor		
D. exempt		
		Angurari C
		Answer: C
Question: 8		
Question. o		
Which three fields in a packet (Choose three.)	must match an IDP rule before	that packet is examined for an attack?
A. terminate match B. service		

D. source address E. attack object	
	Answer: B, C, D
Question: 9	
What is "a deviation from a protocol's expected behavior or packet form	nat"?
A. context B. compound attack object C. attack signature D. protocol anomaly	
	Answer: D
Question: 10
