Administering IBM Connections 3.0

QUESTION: 58

Carlita wants to reconfigure her environment to force Connections to use SSL to encrypt all HTTP page requests. Which configuration command should she use to make this change?

A. LCConfigService.updateConfig("force.ssl.comm.enabled", "true")
B. LCConfigService.updateConfig("force.comm.ssl.enabled", "true")
C. LCConfigService.updateConfig("force.conf.comm.enabled", "true")
D. LCConfigService.updateConfig("force.comm.conf.enabled", "true")

Answer: C

QUESTION: 59

For Connections to support SSL capabilities, which of the following steps must you complete to configure the IBM HTTP Server for SSL traffic?

A. You must edit the LotusConnections-config.xml file to include the path to the SSL certificate.
B. You must add the WebSphere Application Server SSL certificate to IBM HTTP Server's trust store.
C. You must add the IBM HTTP Server to the Connections cluster so that they can share the certificate.
D. You must configure J2C authentication on all the nodes in the Connections environment to share the same certificate.

Answer: B

QUESTION: 60

Fabrizio did not configure the domain in the single sign-on (SSO) configuration for the WebSphere Application Server during setup. Which of the following options is true if he does not specify the domain name in the SSO configuration?

A. SSO is then open to all the application servers in the domain
B. The web browser defaults the domain name to the host name where the web application is running.
C. Each domain presented is compared with the host name of the HTTP request until the first match is located.
D. The application server uses all the information after the first period, from left to right, for the domain names.

Answer: B

QUESTION: 61
You have been asked to change the background of the application from the default blue to dark gray. What's the best way to do this task?

A. Modify the CSS files for each module.
B. Create a blank CSS called custom.css and place in the common customization folder.
C. Create a blank CSS, link to it from header.html, and overwrite styles there.
D. Copy the CSS files for each module to the HTTP server and modify them there.

Answer: B

QUESTION: 62
When adding the community business card to your web application, an Ajax proxy is required. What purpose does this proxy serve?

A. Improved performance
B. Avoids cross-domain security issues
C. Enables the use of custom CSS in your community card
D. Allows users to see private communities business cards

Answer: B

QUESTION: 63
Mail is configured as part of the installation process. If you do not configure mail as part of the installation process, where do you configure a dedicated SMTP server that is used to send notifications?

A. Rerun the installation script to enable notifications.
B. Define a mail session in the WebSphere Application Server.
C. Update<useJavaMailProvider> in the notification-config.xml file.
D. Update<host>my.smtp.server.com</host> in the oa-config.xml file.

Answer: B

QUESTION: 64
Diane wants to change the look of the Profiles business card. What are valid changes that Diane can perform?

A. Add or remove the links that display at the top of the card
B. Add or remove the action links that display at the bottom of the card
C. Customize the contact and location information that displays in the main section of the card
D. All of the above

Answer: D

QUESTION: 65
Peter has configured multiple types of Profiles in Connections, however, all users are still showing the default profile. What can Peter do to resolve this issue?

A. He needs to add the email address for each employee to the PROF_TYPES table.
B. Custom Profiles are not supported.
C. He needs to assign the profile type to the employee record and rerun Profiles synchronization.
D. He needs to extend the LDAP schema and add a <profile-type> attribute to identify which profile would be used for each user.
