Version: 9.0

Question: 1

Which two policies would allow an administrator to configure disaster recovery and archiving in the same destination volume? (Choose two.)

- A. MirrorAllSnapshots
- B. MirrorAndVault
- C. Unified7year
- D. MirrorLatest

Answer: B,C

Question: 2

You have a 2-node FAS9000 cluster that must replicate to a 2-node AFF A300 cluster. Both clusters use self-encrypting drives (SEDs) and need to encrypt all data at rest using centralized key management. Which two features accomplish this task? (Choose two.)

- A. Onboard Key Management
- B. External Key Management
- C. NetApp Volume Encryption (NVE)
- D. NetApp Storage Encryption (NSE)

Answer: B,C

Question: 3

You notice that after you delete data from your FlexVol volume, some Snapshot copies have also been deleted. Snapshot auto delete is enabled.

Which volume autosize mode must be enabled for this behavior to occur?

- A. grow
- B. disrupt
- C. grow_shrink
- D. off

Answer: B

Question: 4

You want to set up protection relationships at the time of provisioning one or more primary volumes in the source cluster in ONTAP.

Which NetApp management tool enables you to accomplish this task?

- A. ONTAP CLI
- B. SnapCenter
- C. OnCommand System Manager
- D. OnCommand Unified Manager

Answer: C

Question: 5

Which OnCommand Workflow Automation (WFA) feature allows users to download prebuilt WFA packs?

- A. the Administration Portal
- B. the Utility Toolchest
- C. the Storage Automation Store
- D. the Designer Portal

Answer: C

Question: 6

A customer has a MetroCluster solution and wants to automate the disaster-recovery process. The customer wants to control the switchover between the sites.

Which NetApp tool would satisfy these requirements?

- A. OnCommand Unified Manager
- B. MetroCluster Tiebreaker
- C. OnCommand System Manager
- D. OnCommand SnapCenter

Answer: B

Question: 7

What does the metrocluster configuration-settings interface create command do?

- A. It creates a MetroCluster local cluster ISL.
- B. It creates a MetroCluster local cluster interconnect.
- C. It creates a MetroCluster intercluster LIF.
- D. It creates a MetroCluster MCCIP interface.

Answer: D

Question: 8

You are using OnCommand Unified Manager to monitor the health and availability of your data protection relationships.

In this situation, what must be added to enable you to create, break, and resynchronize relationships?

- A. SnapCenter
- B. OnCommand System Manager
- C. OnCommand Insight
- D. OnCommand Workflow Automation

Answer: D

Question: 9

You are maintaining a 4-node MetroCluster.

How are the high-availability interconnects cabled?

- A. Each high-availability pair controller is cabled to its local partner.
- B. High-availability interconnects between the nodes are not needed.
- C. High-availability interconnects are only needed for the remote connections between the nodes.
- D. High-availability interconnects are cabled both locally and remotely between the nodes.

Answer: C

Question: 10

You have deployed the DP_Optimized (DPO) license on the destination cluster to support a high number of volumes and peer relationships for setting up data protection with multiple source clusters. You want to obtain a list of unprotected volumes on the source cluster and protect them.

Which two management tools would be used to accomplish this task? (Choose two.)

- A. ONTAP CLI
- B. OnCommand Insight
- C. OnCommand System Manager
- D. OneCollect

Answer: A,C

Question: 11

Synchronous replication is available for which two NetApp solutions? (Choose two.)

- A. StorageGRID Webscale
- B. ONTAP Select
- C. MetroCluster
- D. Cloud Backup

Answer: B,C

Question: 12

A customer has setup an SVM DR relationship to provide disaster recovery capability at the SVM level.

The secondary site has a different network configuration. They want to replicate the protocol and services configuration of the primary SVM to the secondary SVM when creating the SVM DR relationship.

Which two actions will accomplish this task? (Choose two.)

- A. Set the identity preserve option to false.
- B. Set the discard configuration network option.
- C. Set the vserver-dr-protection unprotected option.
- D. Set the identity preserve option to true.

Answer: B,D

Question: 13

A company is evaluating different data protection solutions. The company requires a solution that provides both local failover and storage tiering.

Which two solutions meet these requirements? (Choose two.)

- A. a FAS9000A system with SSD aggregates and FabricPool
- B. a FAS8200A NetApp Private Storage (NPS) system and Cloud Backup
- C. an AFF A300A with StorageGRID WebScale
- D. a FAS2650A system with HDD aggregates and FabricPool

Answer: A,C

Question: 14

You are configuring SnapMirror on the NetApp Cloud Backup appliance (formerly AltaVault).

In this scenario, which LIF type IP addresses must be white listed?

- A. cluster management
- B. cluster
- C. intercluster
- D. node management

Answer: C

Question: 15

A client has a 100 GB NFS volume with a 20% Snapshot reserve that hosts several virtual machines on an aggregate with no additional capacity. There are currently 10 GB of Snapshot copies associated with the past two weeks of activity with the volume. An external monitoring system is reporting that the volume is 99% consumed.

According to NetApp, which action should be used to prevent the volume from going offline?

- A. Modify the Snapshot reserve to 10%.
- B. Enable storage efficiency on the volume.
- C. Expand the aggregate on which the volume resides.
- D. Delete Snapshot copies from the volume to free up space.

Answer: C
