*IBM InfoSphere Guardium Technical Mastery Test v2*

**QUESTION: 40**

What is Guardium's primary storage mechanism for logs and audit information?

- A. Data can only be stored in flat files on the collector (one file per S-TAP).
- B. Data storage can only be managed individually by each S-TAP, with audit data stored locally on the data server in flat files.
- C. Data is stored on the collector in a normalized relational database.
- D. Data is stored locally on each server with an S-TAP but is managed centrally through the collector.

**Answer: C**

**QUESTION: 41**

What is a security policy?

- A. A series of transactions where the data server communicates with the collector and shares its current security status.
- B. An XML file that must be manually created and configured so the S-TAP can understand the nature of the traffic that it reports on.
- C. A Guardium object containing an ordered set of rules that are applied to the observed traffic between clients and data servers.
- D. A specially-formatted document from a government or third-party institution that can be imported into Guardium for easy audit configuration.

**Answer: C**

**QUESTION: 42**

Which of the following best describes the role of the aggregator in a Guardium environment?

- A. The aggregator is a Guardium appliance that collects and consolidates information from multiple collectors to a single Aggregation Server, allowing for reporting across the enterprise.
- B. The aggregator is the Guardium appliance that communicates with mainframes.
- C. The aggregator is a Guardium appliance that allows a collector and a Central Policy Manager to communicate and is required in multi-collector environments.
- D. The aggregator is another name for the Central Policy Manager.

**Answer: A**

**QUESTION: 43**

Which of the following is not a valid termination action for an extrusion rule?

- A. Termination actions are not available for extrusion rules.
- B. S-TAP Terminate.
- C. Termination actions are available for extrusion rules, however these are executed by the database management system and not Guardium.
- D. S-GATE Terminate.

**Answer: D**
