Question: 1	
Which of the following is not a hashing algorithm?	
wither of the following is not a mashing digorithm.	
A. MD5	
B. X.509	
C. SHA-1	
D. SHA-256	
	Answer: B
Question: 2	
The application of the Data Origin Authentication pattern only provides	message integrity.
A. True	
B. False	
	Answer: B
Question: 3	
Service A relies on a shared identity store. Service B has its own identity own identity store, but must also access the shared identity store used has the least reduction in autonomy as a result of its relationship with identity store.	by Service A. Which service
A. Service A	
B. Service B	
C. Service C	
D. The autonomy of all services is affected equally	
	Answer: B
Question: 4	
The requirement to defer security related state data at runtime relates which service-orientation principle?	directly to the application of
A. Service Loose Coupling	
B. Service Autonomy	
C. Service Abstraction	
D. None of the above.	
	A
	Answer: D

Question: 5		
The use of XML-Encryption supports the application of the Service Abstraction principle because the actual message remains hidden from the attacker.		
A. True B. False		
	Answer: B	
Question: 6		
Service A sends a message to Service B which reads the values in the message header to determine whether to forward the message to Service C or Service D. Because of recent attacks on Services C and D, it has been decided to protect the body content of messages using some form of encryption. However, certain restrictions within the design of Service B will not permit it to be changed to support the encryption and decryption of messages. Only Services A, C and D can support message encryption and decryption. Which of the following approaches fulfill these security requirements without changing the role of Service B? A. Transport-layer security is implemented between all services. B. Message-layer security is implemented between all services. C. Service B is removed. Instead, the routing logic is added to Service A. D. None of the above		
	Answer: B	
Question: 7		
The application of the Brokered Authentication pattern is best suited for a scenario whereby a service consumer does not need to re-authenticate itself with multiple services.		
A. True B. False		
	Answer: B	
Question: 8		
The SAML and WS-Security industry standards can be applied to the sam architecture.	e service composition	
A. True B. False		
	Answer: A
